of cloud decision-makers at US enterprises use public cloud to extend and modernize existing applications and services*

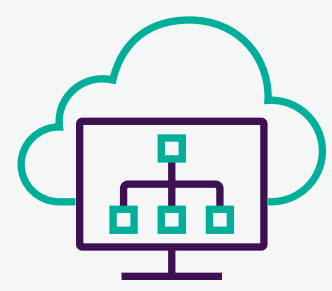

* The State Of Cloud In The US, 2024 | Forrester, November 15, 2024

Organizations are accelerating migration to the cloud and modernizing infrastructure.

How can you ensure application performance and network security?

Forcepoint Secure SD-WAN delivers a simplified approach to network management. It optimizes connectivity to multi-cloud environments, increases application performance and network resiliency, and incorporates advanced networking security capabilities— all managed from a central location.

Forcepoint Secure SD-WAN combines true multi-link networking and advanced intrusion prevention with zero-touch deployment and updating—providing centralized visibility and control with high performance that scales to thousands of sites.

Forcepoint provides industry-leading security capabilities to ensure that users and systems can safely connect to cloud apps and resources.
